Cyber Risk Assessment

A CYBER RISK ASSESSMENT WILL REDUCE RISK BY PROVIDING:

- An internal and external perspective of your security posture
- Gap analysis of your existing end point protection
- Awareness of any compromised credentials
- Confirmation your cloud service is configured securely
- Augmentation of existing solutions using an AI based technology to discover hidden malicious files, processes, scripts and business email compromise events
- Cyber insurance readiness
- Visibility of supply chain risk

Ignition Technology was founded to help our customers to navigate the increasingly complex world of cyber security with a focus on software and software as a service technologies.

By leveraging those technologies as well as the decades of experience of our engineers in the security space, Cyber Risk Assessment is designed to provide both an internal and external perspective of the security posture of your organisation, identify any areas of risk or exposure and make recommendations according to industry best practice and good cyber security hygiene.

The Cyber Risk Assessment has been designed to be a light touch engagement that runs for a fixed period of time and results in real world, actionable intelligence specific to your environment that will help improve and validate your cyber security posture.
